Luc Heiligenstein designed this sports watch using both Ashlar-Vellum drafting and 3D modeling software.

"With Cobalt you can just extrude in any direction to get a product shape very quickly. It's as flexible as modeling clay. Unlike other design software, you don't have to calculate everything using parametrics, create a detailed assembly and add all the dimensions just to get something to show the client for interim approval."

Creation of organic shapes with precision manufacturing make Cobalt ideal for medical applications, including these carts designed by **Glenn Polinsky** for Modco, Inc.

"The great thing about Cobalt is that it lets us sketch out our ideas as easily as if we were working with a pencil, and then simply tighten them up when the time is right to produce a fully defined 3D model."

Bob Parks, aeronautical engineering consultant.
